

Cloud Security

Spammers around the world continue to send millions of unsolicited emails, clogging inboxes and infecting computers with malicious code.

MXSweep hosted email security delivers world class and cost effective anti-spam and anti-virus security alongside email disaster recovery and content control services. MXSweep email protection service shields business customers from all email-borne cyber threats eliminating the productivity drain, IT-related costs and growing legal liability associated with unwanted and unsolicited email.

Email Security in the Cloud

MXSweep Email Security Services

Securing your email is a complex process. It can consume time and user resources that can be better deployed elsewhere in your business. Together our email protection services help our customers achieve a smoothly working IT infrastructure that drives efficiency and productivity.

MXSweep offers three email security services:

- **Email protection:** Combines effective anti-spam, anti-virus and anti-phishing cover with uniquely low false positives.
- **Content control:** Protects against external threats, abuses and the misuse of sensitive or classified information for a secure working environment.
- **Recovery and continuity:** Captures all email in an easy-to-access encrypted archive for instant retrieval – even when the server's down.

MXSweep Services Delivery

The benefits of Cloud Security are immediate. With no hardware or software to install and maintain your business gets access to the Industry's most reliable anti-spam and anti-virus protection service that stops any threats or intruders ever reaching your network.

MXSweep email security services are delivered by one centrally managed hosted 'In the cloud' solution that is more secure and easier to manage than on-premise solutions.
